SENASA proposes the following phytosanitary requirements for the importation of ryegrass seeds (*Lolium multiflorum*, *Lolium perenne*, *Lolium x hybridum*) from New Zealand to Peru.

- 1. The consignment must be accompanied by an official Phytosanitary Certificate from the country of origin, in which will be consigned the following:
- 1.1. Additional Declaration:
- 1.1.1. The seeds come from places of production or seedbed registered by the National Organization of Phytosanitary Protection of the country of origin.
- 1.1.2. The seeds come from mother plants that have been inspected and evaluated by analytical techniques and are free of: *Pseudomonas syringae pv. syringae, Xanthomonas translucens pv. Graminis y Lolium perenne partitivirus*. (Indicate the diagnostic technique used for each pest)
- 1.1.3. The seeds are free from: Fusarium poae, Monographella nivalis, Pyronophora dictyoides, Gloeotinia temulenta, Pyrenophora Iolii, Tilletia walkeri, Anguina Agrostis, Alopecurus myosuroides, Anthemis Cotula, Bromus Diandrus spp rigidus, Bromus sterilis, Carduus nutans, Echium plantagineum, Phalaris paradoxa, Polygonum hydropiper and Polygonum lapathifolium. (Corroborated by laboratory analysis).
- 1.2. Pre-shipment treatment with:
- 1.2.1. Imazalil at 80 mg a.i. per kg seed & triadimenol at 220 mg a.i. per kg seed.
- 1.2.2. Any other equivalent action products.
- 2. The containers will be new and first-use, closed and resistant to handling, free of material foreign to the product, duly labeled with the name of the product and the exporter and the origin.
- 3. Phytosanitary inspection at the entry point of the country.
- 4. Upon arrival of the material, the Inspector of SENASA will take a sample of the shipment to be sent to the Unit of the Center for Diagnosis of Plant Health of SENASA. The cost of the diagnosis will be borne by the importer.
